DETAILED ACTION

Election/Restriction

1. Claims 1-47 are generic to a plurality of disclosed patentably distinct species comprising:

I. specific cell type, e.g. yeast or mammalian.

II. specific receptor protein, e.g. β_2 -adrenergic receptor or STE2

III. specific biochemical pathway, e.g. a particular MAPK pathway or yeast pheromone response pathway.

IIIa. specific mutation in a particular gene/ protein participating in the pathway.

IIIb. specific heterologous polypeptide.

IV. specific signal to be amplified, including a particular reporter gene construct.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, such species being a single embodiment of the instant invention, such embodiment consisting of only those components which would be present in **one particular** cell. Applicant is required to elect a single example from each of I-IV, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the

Art Unit: 1646

examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

2. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
